## IP Rate

### Αναλυτική επεξήγηση του βαθμού στεγανότητας IPXX

Σίγουρα έχετε δει σε διάφορα φωτιστικά να αναφέρεται κάποιος βαθμός προστασίας IP, όπως IP54, IPX8 κ.λπ. Οι αριθμοί αυτοί υποδηλώνουν μια συγκεκριμένη πιστοποίηση για το φωτιστικό, στο κατά πόσον αυτό είναι αδιάβροχο και προστατευμένο. Για παράδειγμα, ένα φωτιστικό μπορεί να είναι αδιάβροχο όταν ψιχαλίζει, αλλά να μην είναι αδιάβροχο όταν αυτό πέσει/βυθιστεί στο νερό.

Με την κατάλληλη πιστοποίηση, ο καταναλωτής είναι σε θέση να γνωρίζει ακριβώς τον βαθμό αδιαβροχοποίησης του φωτιστικού που αγοράζει και όχι εάν είναι αδιάβροχο, γενικά και αόριστα.

Ο έλεγχος της πιστοποίησης πραγματοποιείται σε εργαστήρια, σύμφωνα με συγκεκριμένες διαδικασίες, οι οποίες ακολουθούν το πρότυπο IEC 60529, ώστε να είναι πάντα οι ίδιες, ανεξαρτήτως του προϊόντος ή του κατασκευαστή. Η κωδικοποίηση IPXX, που ακολουθείται πιο συχνά, έχει 2 ψηφία, τα οποία παίρνουν συγκεκριμένες τιμές και ενημερώνουν τον καταναλωτή για την πιστοποίηση που φέρει το προϊόν.

## Συγκεκριμένα

A. Το πρώτο X πιστοποιεί την προστασία που διαθέτει το προϊόν από την είσοδο στερεών σωματιδίων. Παίρνει τιμές από 0-6, όπως αναλύεται παρακάτω:

0 = Καμία προστασία.

1 = Προστασία από την είσοδο στερεών σωματιδίων με διάμετρο πάχους άνω των 50,00 χιλιοστών.

2 = Προστασία από την είσοδο στερεών σωματιδίων με διάμετρο πάχους άνω των 12,00 χιλιοστών.

3 = Προστασία από την είσοδο στερεών σωματιδίων με διάμετρο πάχους άνω των 2,50 χιλιοστών.

4 = Προστασία από την είσοδο στερεών σωματιδίων με διάμετρο πάχους άνω του 1,00 χιλιοστού.

5 = Προστασία από την ποσότητα της σκόνης όπου θα ήταν ικανή να επηρεάσει τη φυσιολογική λειτουργία της συσκευής.

6 = Δεν μπαίνει καθόλου σκόνη.

B. Το δεύτερο X πιστοποιεί την προστασία που διαθέτει το προϊόν από την είσοδο νερού. Παίρνει τιμές από 0-8, όπως αναλύεται παρακάτω.

0 = Καμία προστασία.

1 = Προστασία από σταγόνες νερού που πέφτουν κατακόρυφα.

2 = Προστασία από απευθείας ψεκαζόμενες σταγόνες νερού, με κλίση έως 15 μοίρες ως προς την κατακόρυφο.

3 = Προστασία από απευθείας ψεκαζόμενες σταγόνες νερού, με κλίση έως 60 μοίρες ως προς την κατακόρυφο.

4 = Προστασία από νερό που ψεκάζεται από πάσα κατεύθυνση.

5 = Προστασία από πίδακες νερού που πέφτουν υπό χαμηλή πίεση, από πάσα κατεύθυνση.

6 = Προστασία από πίδακες νερού που πέφτουν υπό υψηλή πίεση.

7 = Προστασία από το νερό, σε βύθισμα βάθους από 15 εκατοστά έως ένα μέτρο, έως και 30 λεπτά.

8 = Προστασία από το νερό, σε βύθισμα για μεγάλες χρονικές περιόδους, υπό δοσμένη πίεση.

	grounding		indicates rechargeable battery
	incl. motion sensor		indicates material
	max. load on the article		9 colors changing
	neckline of article		power supply adapter
	neckline of article		remote controller 3-4m
	indicates the installation depth		pieces per box

## IP Rate

## Analytical explanation of IPXX protection degree

You have certainly seen in some luminaires the reference to some degree of IP protection, such as IPX54, IPX8 etc. These numbers imply a specific certification for the luminaire, whether it is waterproof and protected. For example, a luminaire may be waterproof when it is under drizzling rain, but may not be when dropped/sunk into the water.

With the proper certification, the consumer is able to know the exact degree of water resistance of the luminaire he is buying, not only if it's water resistant, in general.

The certification testing is carried out in laboratories, followed by specific procedures, according to the International Standard IEC 60529, which (procedures) are always the same, regardless of the product or the manufacturer. The most frequently followed IPXX encoding has 2 digits, which get specific values and inform the consumer of the certification that the product carries.

### More specifically

A. The first digit (X) of the IP code indicates the degree of protection of the product against solid particles intruding into an enclosure. It takes values from 0-6, as analyzed below:

0 = No special protection.

1 = Protection from entry by solid particles with a diameter of thickness greater than 50,00mm.

2 = Protection from entry by solid particles with a diameter of thickness greater than 12,00mm.

3 = Protection from entry by solid particles with a diameter of thickness greater than 2,50mm.

4 = Protection from entry by solid particles with a diameter of thickness greater than 1,00mm.

5 = Protection from the amount of dust that would interfere with the operation of the equipment.

6 = Dust tight.

B. The second digit (X) of the IP code indicates the degree of protection of the product inside an enclosure against the harmful entry of various forms of moisture. It takes values from 0-8, as analyzed below:

0 = No special protection.

1 = Protection against vertically falling drops of water.

2 = Protection against direct sprays of water up to 15 degrees from vertical angle.

3 = Protection against direct sprays of water up to 60 degrees from vertical angle.

4 = Protection against water splashed from all directions.

5 = Protection against low pressure jets of water from all directions.

6 = Protection against powerful jets of water.

7 = Protection against the effect of immersion between 15,00cm and 1,00m for up to 30 minutes.

8 = Protection against long periods of immersion under pressure.

## Κλάση I & II

### Κλάση I

Αυτές οι συσκευές πρέπει να έχουν το σασί τους συνδεδεμένο με ηλεκτρική γείωση (ΗΠΑ: γείωση) με ξεχωριστό καλώδιο γείωσης (χρώματος πράσινου/κίτρινου στις περισσότερες χώρες, πράσινου στις ΗΠΑ, τον Καναδά και την Ιαπωνία). Η σύνδεση γείωσης επιτυγχάνεται με ένα καλώδιο τριών αγωγών, το οποίο τυπικά τελειώνει με υποδοχή εναλλασσόμενου ρεύματος (AC) τριών (3) ακίδων, που συνδέεται σε αντίστοιχη έξοδο εναλλασσόμενου ρεύματος. Η βασική απαίτηση είναι ότι καμία απλή αστοχία δεν μπορεί να οδηγήσει σε έκθεση σε επικίνδυνη τάση, ώστε να προκληθεί ηλεκτροπληξία και ότι σε περίπτωση βλάβης, η τροφοδοσία θα αφαιρεθεί αυτόματα [μερικές φορές αναφέρεται ως αυτόματη αποσύνδεση τροφοδοσίας (ADS)].

Ένα σφάλμα στη συσκευή που προκαλεί την επαφή ενός ενεργού αγωγού με το περίβλημα, θα προκαλέσει τη ροή ρεύματος στον αγωγό γείωσης. Εάν είναι αρκετά μεγάλο, αυτό το ρεύμα θα σβήσει μία συσκευή υπερβολικής τάσης ρεύματος [ασφάλεια ή διακόπτης κυκλώματος (CB)] και θα αποσυνδέσει την παροχή. Ο χρόνος αποσύνδεσης πρέπει να είναι αρκετά γρήγορος ώστε να μην επιτρέπεται η έναρξη της μαρμαρυγής εάν ένα άτομο έρχεται σε επαφή με το περίβλημα τη δεδομένη στιγμή. Αυτή τη φορά και η τρέχουσα διαβάθμιση με τη σειρά της επιτρέπει τη μέγιστη αντίσταση γείωσης. Για να παρέχεται συμπληρωματική προστασία έναντι σφαλμάτων υψηλής σύνθεσης αντίστασης, είναι σύνθετες να συνιστούμε μία συσκευή υπολειπόμενου ρεύματος (RCD), γνωστή και ως διακόπτης προστασίας υπολειπόμενου ρεύματος (RCCB), διακόπτης κυκλώματος βλάβης γείωσης (GFCI), ή διακόπτης προστασίας από υπολειμματικό ρεύμα με ενσωματωμένη προστασία υπέρτασης ρεύματος (RCBO), ο οποίος θα διακόψει την παροχή ηλεκτρικού ρεύματος στη συσκευή εάν τα ρεύματα στους δύο πόλους της παροχής δεν είναι ίσα και αντίθετα.

### Κλάση II

Μια ηλεκτρική συσκευή "Κλάσης II" ή με διπλή μόνωση, είναι εκείνη που έχει σχεδιαστεί κατά τέτοιο τρόπο, ώστε να μην απαιτεί τη σύνδεση ασφαλείας σε ηλεκτρική γείωση.

Η βασική απαίτηση είναι ότι καμία απλή αστοχία δεν μπορεί να οδηγήσει στην έκθεση σε επικίνδυνη τάση ώστε να προκληθεί ηλεκτροπληξία και ότι αυτό θα πρέπει να επιτυγχάνεται δίχως να στηρίζεται σε γεωμένο μεταλλικό περίβλημα. Αυτό συνήθως επιτυγχάνεται τουλάχιστον εν μέρει με την ύπαρξη τουλάχιστον δύο στρώσεων μονωτικού υλικού μεταξύ των ενεργών τμημάτων και του χρήστη, ή με τη χρήση ενισχυμένης μόνωσης.

Στην Ευρώπη, μία συσκευή με διπλή μόνωση πρέπει να φέρει την ετικέτα "Κλάση II" (Class II) ή "διπλής μόνωσης" ή να φέρει το σύμβολο διπλής μόνωσης ( ένα τετράγωνο μέσα σε ένα άλλο τετράγωνο).

Τα μονωμένα τροφοδοτικά εναλλασσόμενου ρεύματος (όπως φορτιστές κινητού τηλεφώνου), τυπικά χαρακτηρίζονται ως "Κλάση II", πράγμα που σημαίνει ότι τα καλώδια εξόδου συνεχούς ρεύματος (DC) απομονώνονται από την είσοδο εναλλασσόμενου ρεύματος. Η ονομασία "Κλάση II" δεν πρέπει να συγχέεται με την ονομασία "Κλάση 2", καθώς η τελευταία δεν σχετίζεται με τη μόνωση (προέρχεται από το πρότυπο UL 1310, καθορίζοντας τα όρια μέγιστης τάσης/ρεύματος/ισχύος).

## Class I & II

### Class I

These appliances must have their chassis connected to electrical earth (US: ground) by a separate earth conductor (colored green/ yellow in most countries, green in the US, Canada and Japan). The earth connection is achieved with a 3-conductor mains cable, typically ending with 3-prong AC connector which plugs into corresponding AC outlet. The basic requirement is that no single failure can result in dangerous voltage becoming exposed so that it might cause an electric shock and that if a fault occurs the supply will be removed automatically (this is sometimes referred to as ADS = Automatic Disconnection of Supply).

A fault in the appliance which causes a live conductor to contact the casing will cause a current to flow in the earth conductor. If large enough, this current will trip an over current device [fuse or circuit breaker (CB)] and disconnect the supply. The disconnection time has to be fast enough not to allow fibrillation to start if a person is in contact with the casing at the time. This time and the current rating in turn sets a maximum earth resistance permissible. To provide supplementary protection against high-impedance faults, it is common to recommend a residual current operated circuit-breaker with integral over-current protection (RCBO), which will cut off the supply of electricity to the appliance if the currents in the two poles of the supply are not equal and opposite.

### Class II

A Class II or double insulated electrical appliance, is one which has been designed in such a way that it does not require a safety connection to electrical earth (ground).

The basic requirement is that no single failure can result in dangerous voltage becoming exposed so that it might cause an electric shock and that is achieved without relying on an earthed metal casing. This is usually achieved at least in part by having at least two layers of insulating material between live parts and the user, or by using reinforced insulation.

In Europe, a double insulated appliance must be labelled "Class II" or double insulated or bear the double insulation symbol (a square inside another square).

Insulated AC/DC power supplies (such as cell-phone chargers), are typically designated as "Class II", meaning that the DC output wires are isolated from the AC input. The designation "Class II" should not be confused with the designation of "Class 2", as the latter is unrelated to insulation (it originates from standard UL 1310, setting limits on maximum output voltage/ current/ power).

### 1 New Installation Steps

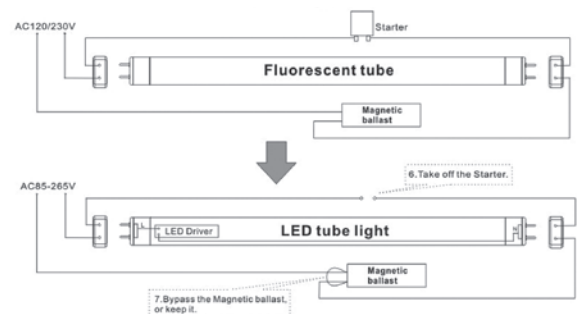

1. Switch off the power.
2. Snap in the two lamp holders into the two ends of the bracket.
3. Mount the bracket onto the intended location.
4. Install the LED T8 tube onto the bracket.
5. Connect the wire to power source.
6. Switch on the power.

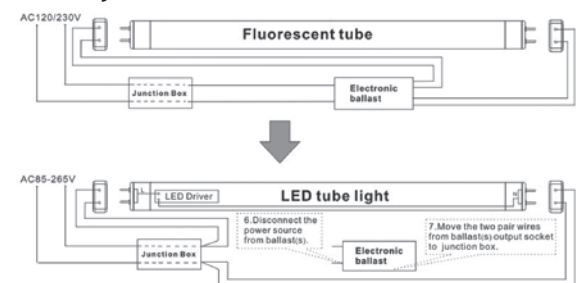

### 2 Replacement Installation Steps

1. Switch off the power.
2. Take off the fluorescent tube.
3. Take off the cover of bracket.
4. Check what ballast was used inside, Magnetic ballast or Electronic ballast. (Note: magnetic ballast usually works with a starter on the bracket)
5. According to the ballast type, refer to one of the following wiring schematics.

#### Re-wiring with Magnetic Ballast

#### Re-wiring with Electronic Ballast

# T5 G5. 240V. Double End Power Input. LED Lamps

Rotation	360°
Detection distance	6m max (<24°C)
Installing height	2.2-4m
Time delay	Min: 10sec±3sec (<24°C) Max: 15min±2min
Price	11.90€

## VK/IR/SENSOR

Code	90004-032126
Model	VK/IR/SENSOR
Description	Infrared motion detector
Detection range	6m max (<22-24°C)
Color body	White
Voltage	220-240V/50Hz
Watt	800W (incandescent lamp), 200W (energy saving lamp)
Cable length	18cm (sensor - controller)
Operating temperature	-20°C → 40°C
Detection angle	360°
Detection speed	0.6 ~ 1.5m/s
Material	PC
IP Rating	IP20
Price	22.00€

Light temperature 3 LUX to 2000 LUX. Working humidity <93% RH.  
 Delay time 5sec, 30sec, 1min, 3mins, 5mins, 8mins. Installation height 1.8m ~ 2.5m.  
 Power consumption 0.45W (work), 0.1W (static). Visible part 22x10mm.  
 Built-in part (controller) 55x25x35mm.
