SLAMP'S SUSTAINABLE PROJECT

The quality of Slamp's materials and their sustainable approach to working with them has set the company apart since 1994. Their resistant, long-lasting technopolymers not only exhibit optimal thermal, electrical, and chemical properties, but these unique materials are recyclable. The manufacturing processes have a low impact on the environment: the lamps' technopolymer sheets undergo cold cutting before being constructed by hand. The small amount of extra cuttings are recycled monthly, and since the beginning of 2020, a portion of those are being made into beehives for bumblebees by DS-Group. Bumblebees, part of the Apidae family, are widely used in pollinating fruit trees (replacing toxic chemicals). They are used for tomatoes as well, and ensure quality, juicy crops. Slamp applied the same approach to their headquarters, inaugurated September 8, 2019. High priority was placed on architectural decisions, including isolating thermal materials and large windows facing the production lines to reduce the use of artificial light. The hub's energy comes from predominantly renewable sources.

Per le qualità intrinseche dei materiali che impiega, e per le tecniche di lavorazione che utilizza, Slamp è un'azienda a basso impatto ambientale sin dal 1994. I tecnopolimeri, resistenti e durevoli, sono dotati di ottime proprietà termiche, elettriche e chimiche, e – soprattutto – sono riciclabili. I pochi sfridi di lavorazione generati durante la produzione vengono riciclati da sempre ma, dal 2020, parte di essi viene utilizzata anche per la produzione di componenti di arnie per i Bombi. Questa particolare tipologia di imenotteri è fondamentale per la tutela della biodiversità e permette l'impollinazione naturale di piante da frutto e ortaggi in alternativa a prodotti chimici altamente tossici. L'attenzione e la cura dell'ambiente hanno influito anche sull'architettura della sede di Slamp inaugurata nel 2019 alle porte di Roma: parte dell'energia assorbita dall'impianto produttivo arriva da fonti rinnovabili, l'hub produttivo è stato realizzato utilizzando materiali altamente isolanti e gli ampi lucernari sulle linee di allestimento riducono il consumo di luce artificiale.
